AI Daily Planner

English version — product walkthrough

A Telegram reminder bot that understands plain-language tasks, plus a web dashboard — screenshots from a live working build.

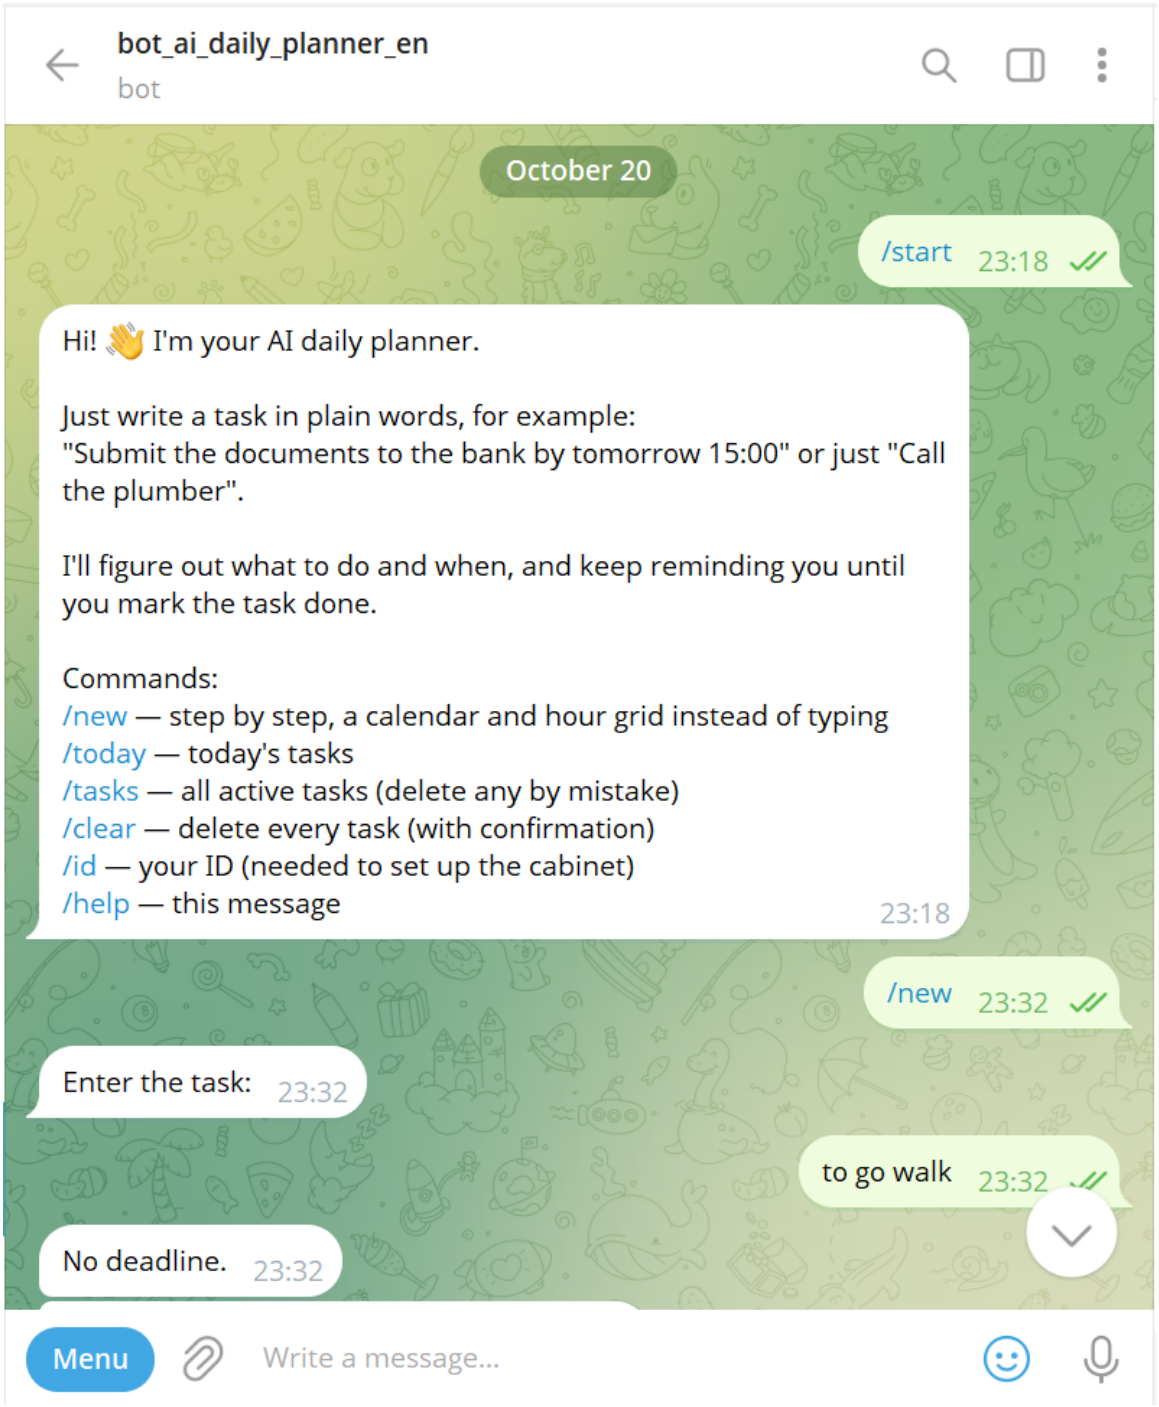

@ai_daily_planner_english_bot

Natural onboarding

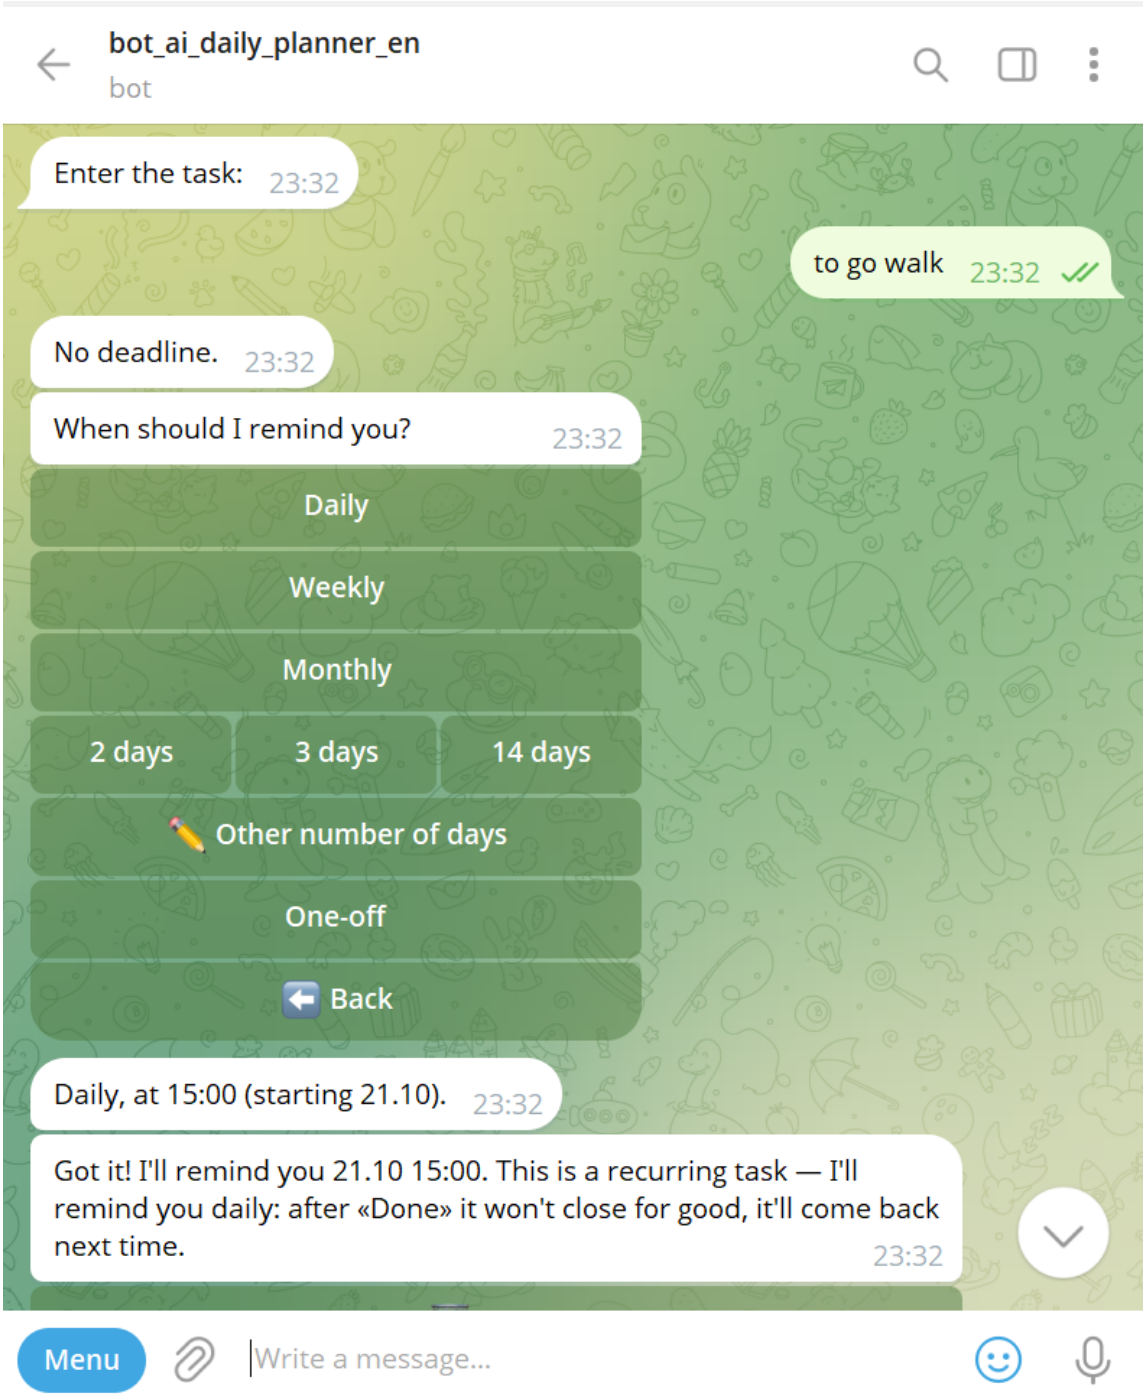

A plain /start message explains what the bot does and how to use it — no setup screens, no manual.

Step-by-step task wizard

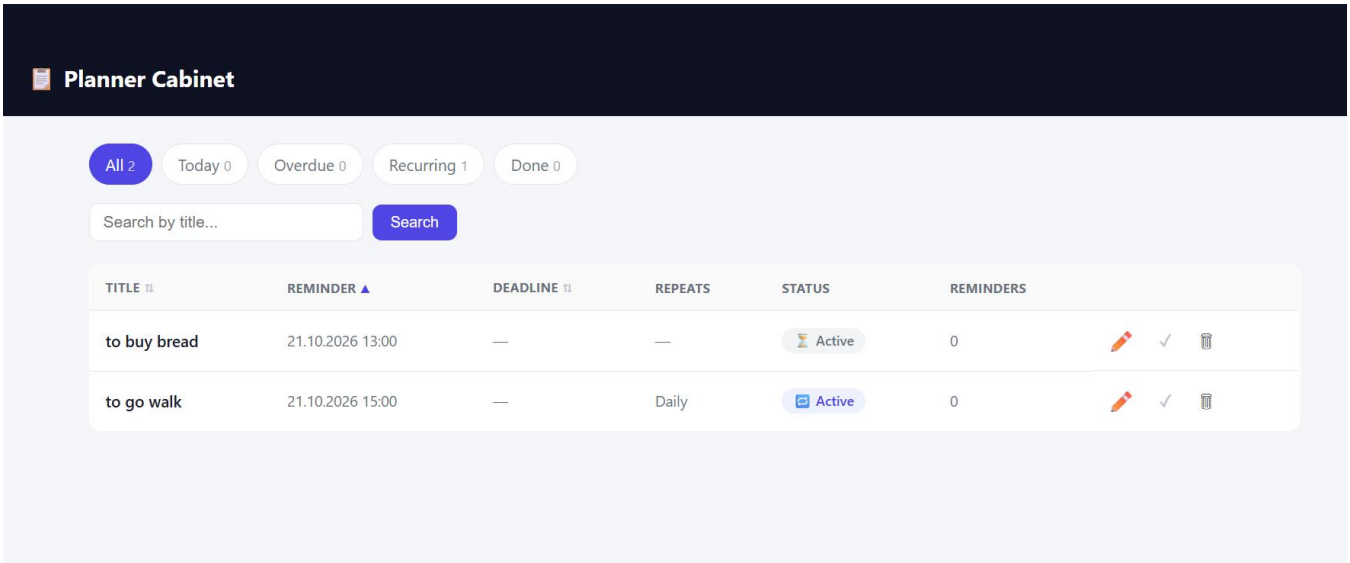

The /new wizard builds a task entirely by tapping: a calendar grid for the date, an hour/minute grid for the time, and a menu for how often to repeat. No date formats to remember or type.

Recurring tasks

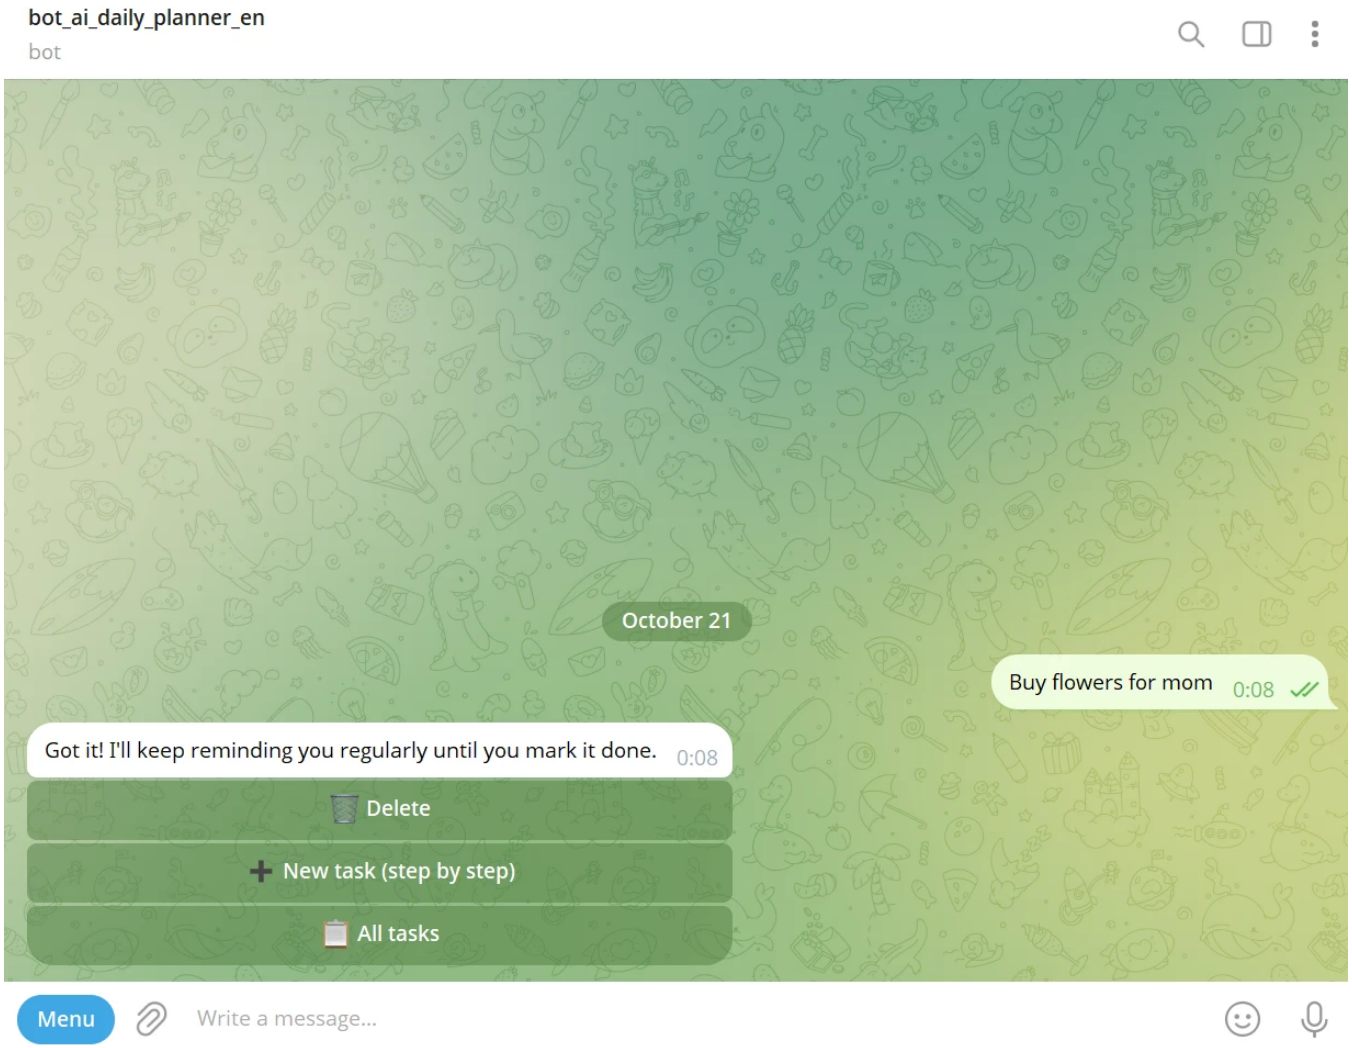

Choosing “Daily” (or Weekly / Monthly / a custom number of days) turns a task into a recurring one — marking it done moves it to the next cycle instead of closing it for good.

Web cabinet dashboard

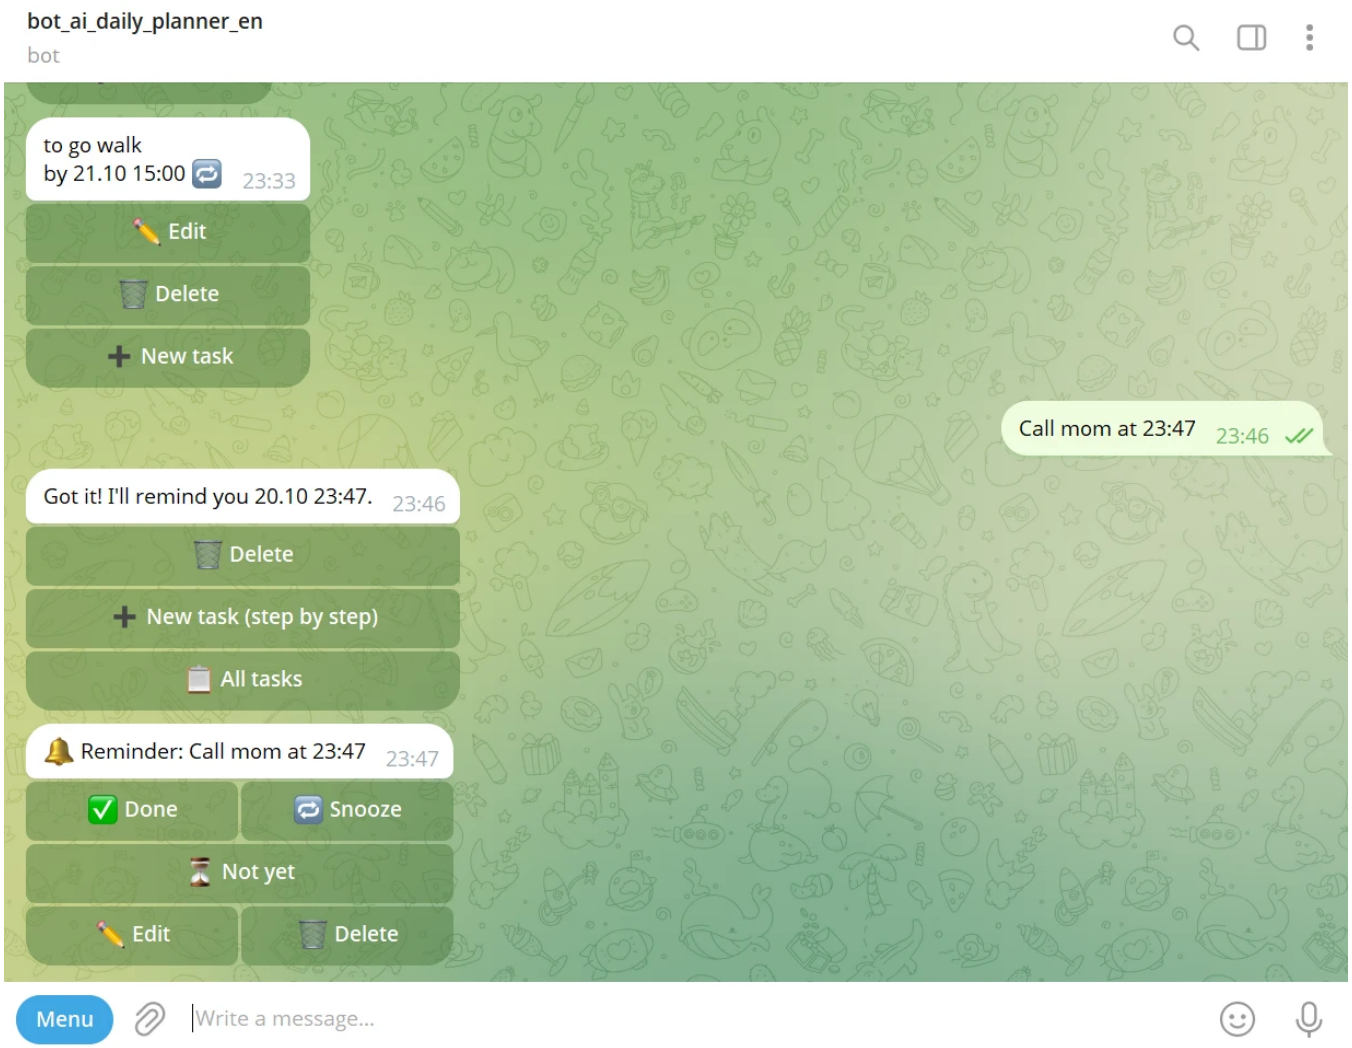

A companion web dashboard lists every task with filters (All / Today / Overdue / Recurring / Done), a search box and sortable columns.

Tasks without a deadline

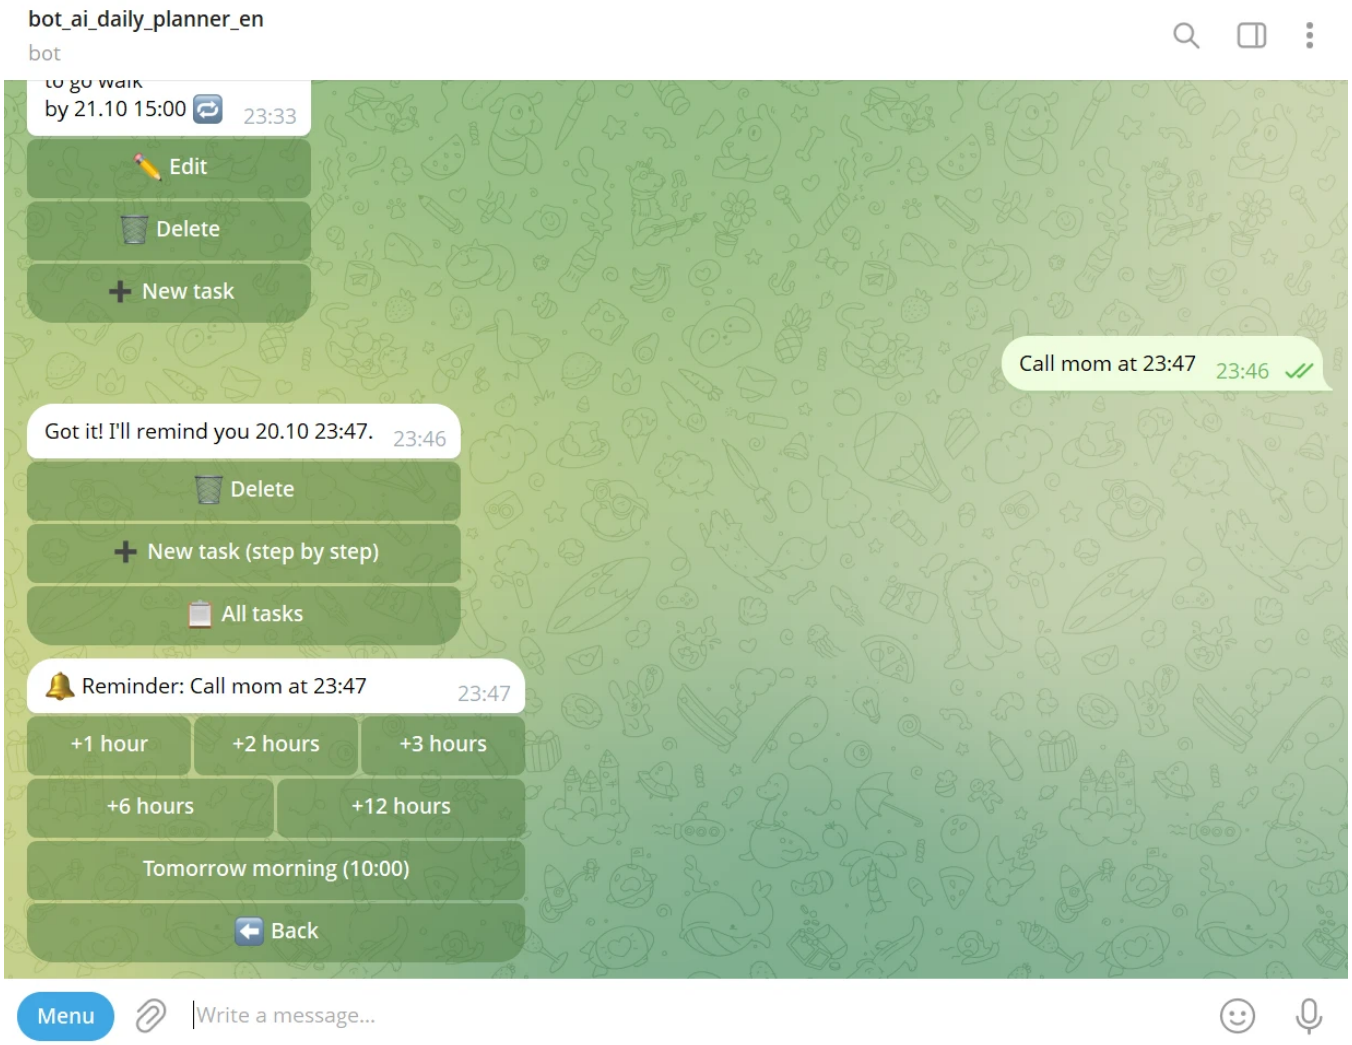

A task written with no date at all is still tracked — the bot reminds regularly until it's marked done.

A real reminder, in context

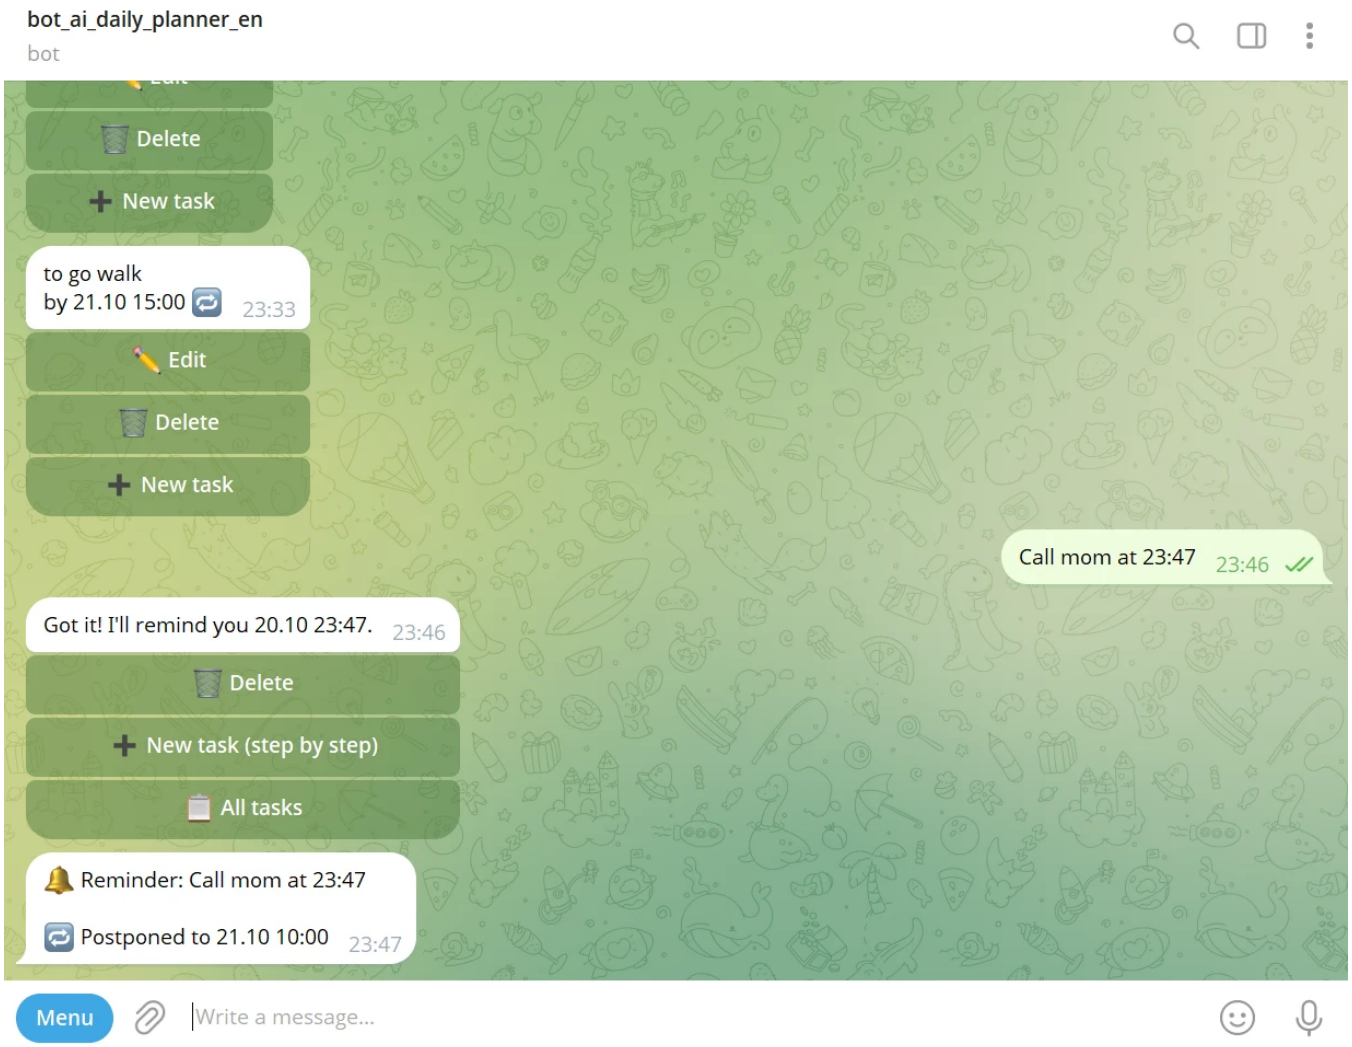

When a reminder is due, the bot sends it with one-tap actions: Done, Snooze, Not yet, Edit, Delete.

A snooze menu, not a mystery delay

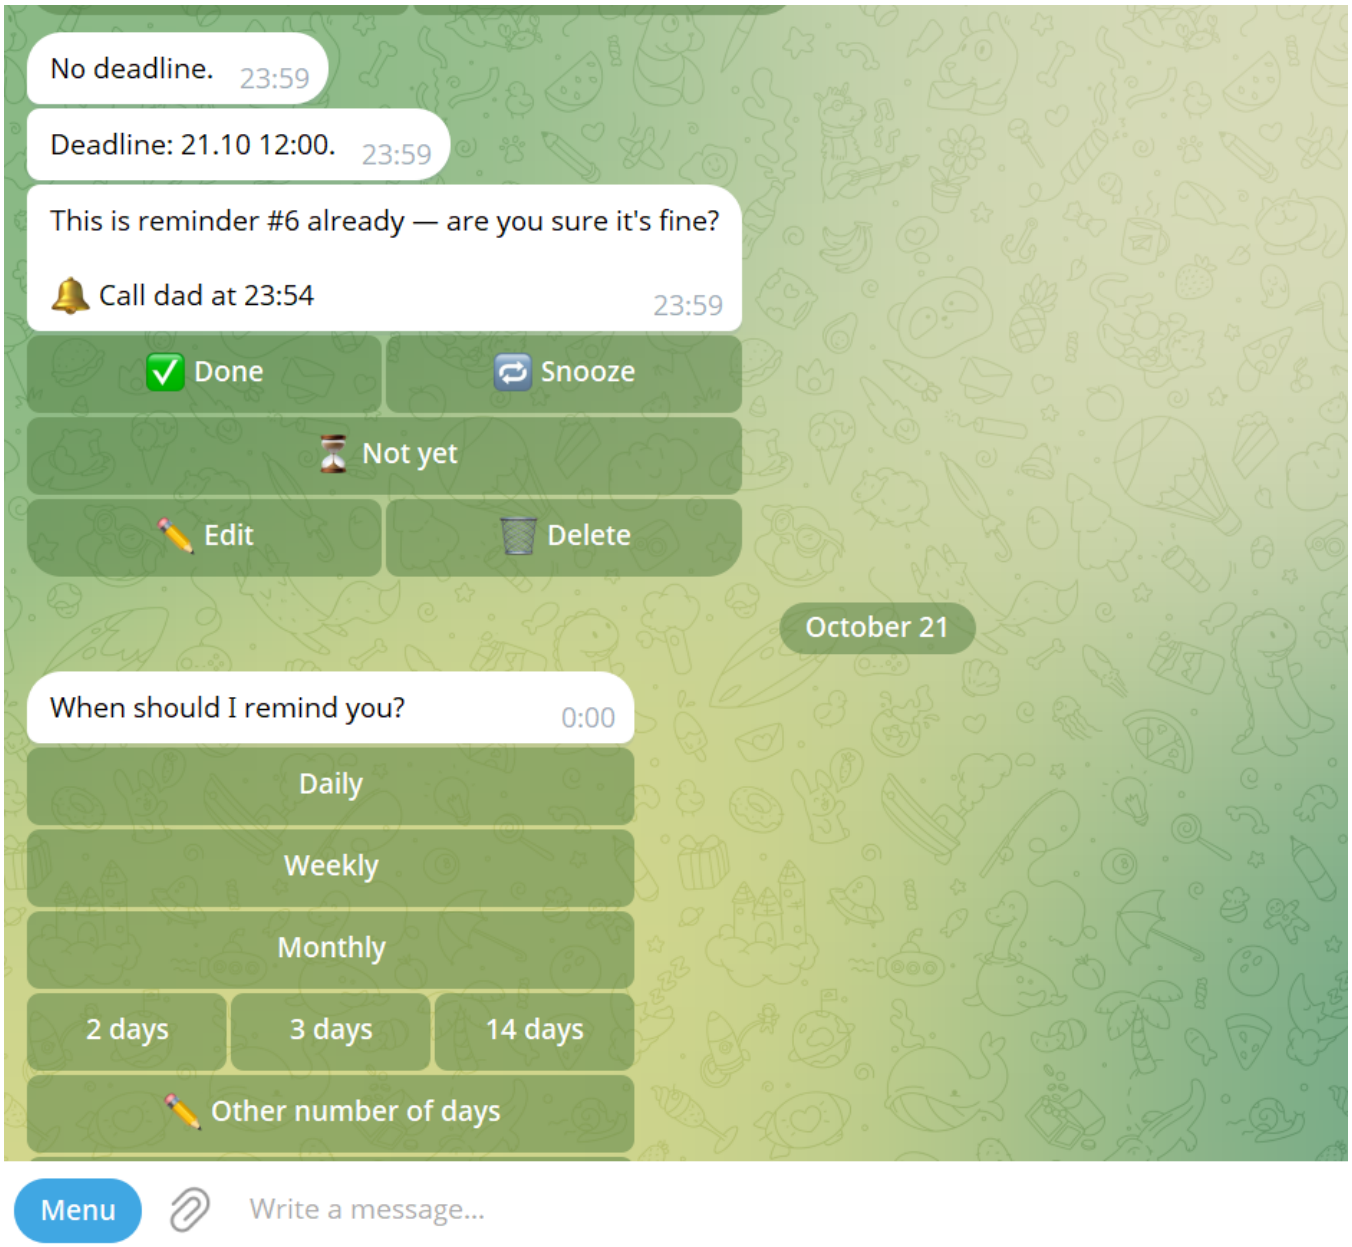

Tapping Snooze opens concrete offsets — +1 to +12 hours, or tomorrow morning — instead of silently picking a fixed delay with no way to know it in advance.

Snooze confirmed

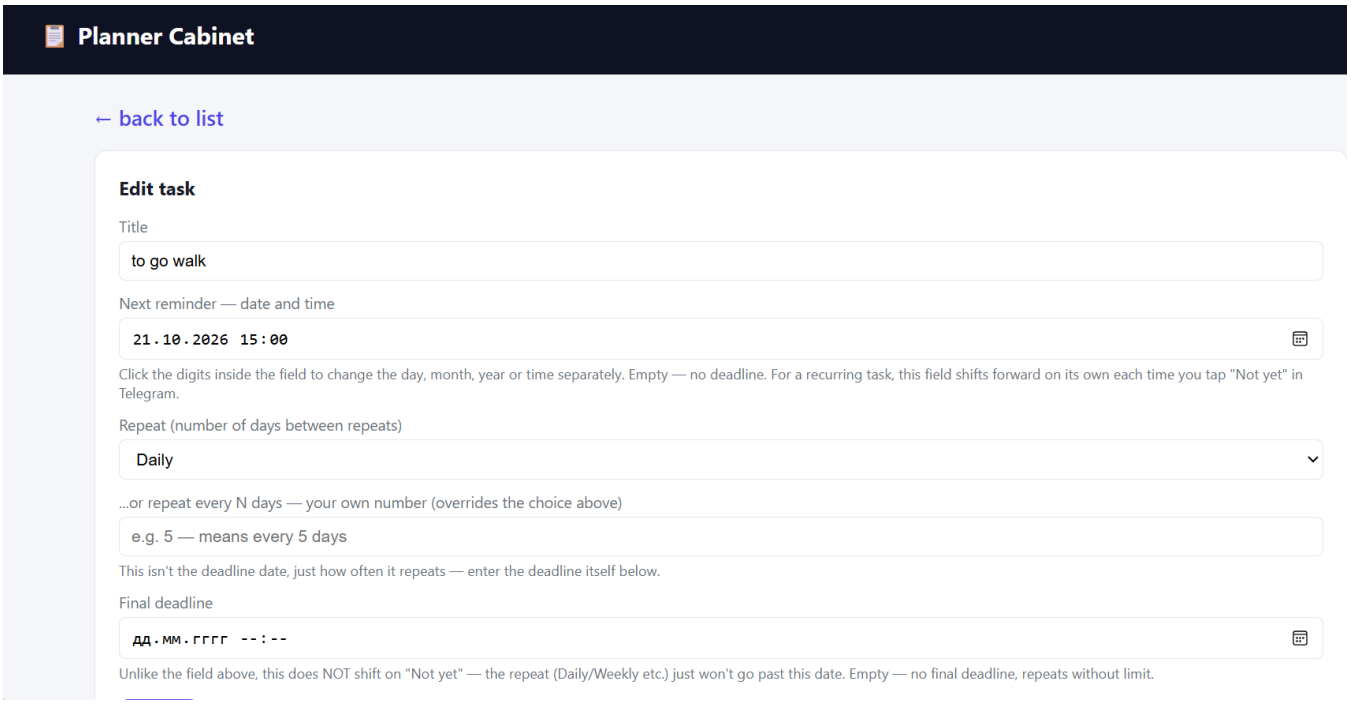

After picking an offset, the bot confirms the exact new time.

Escalating tone

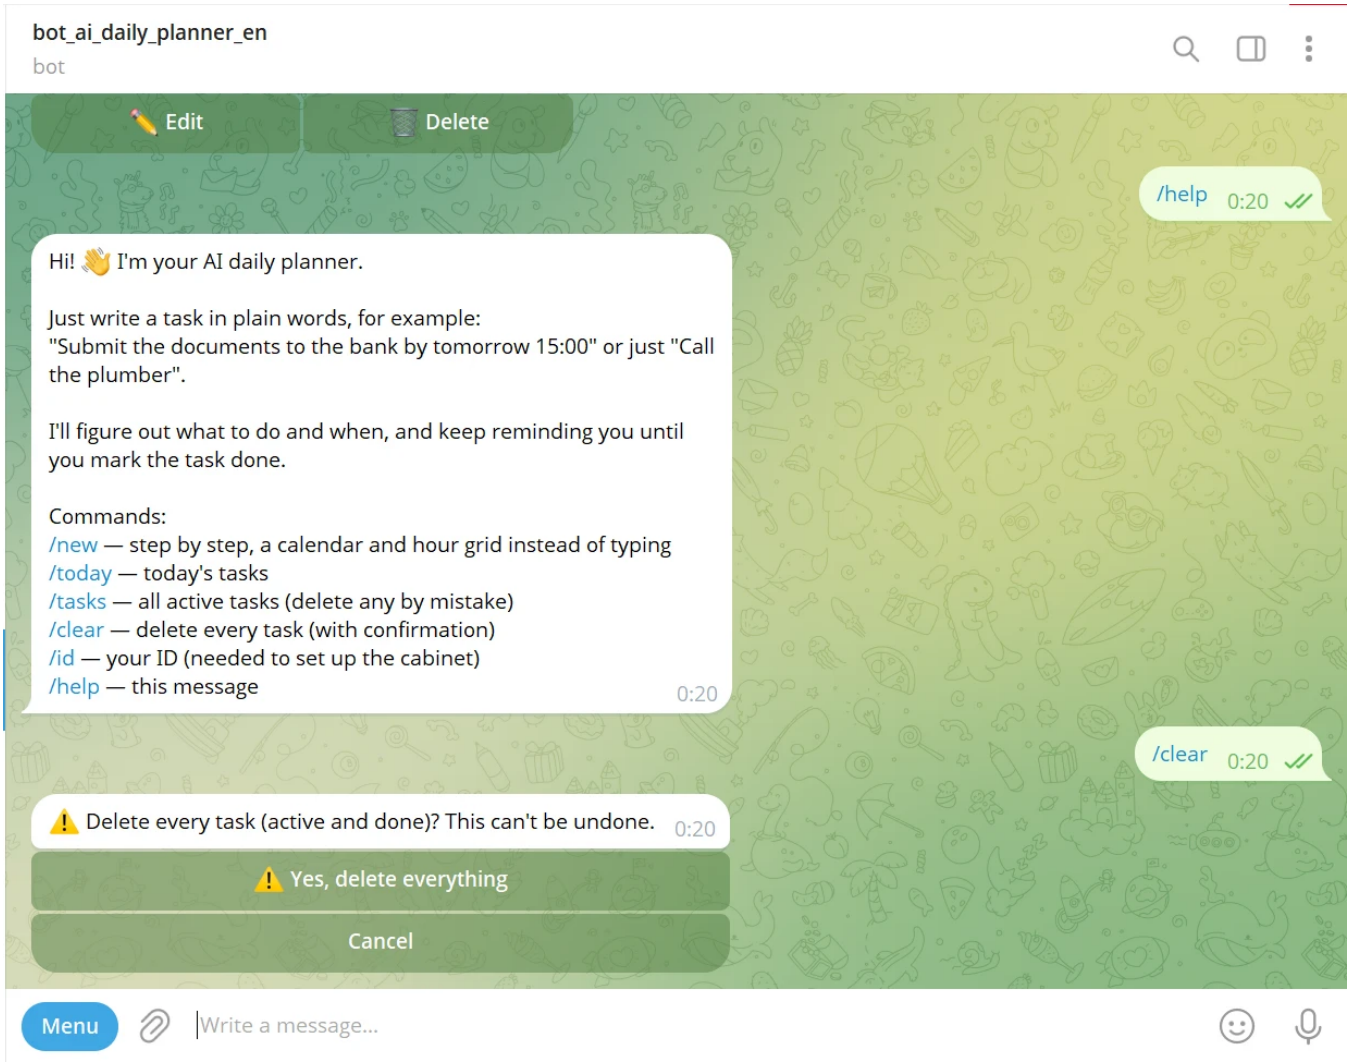

Ignore a reminder enough times in a row and its tone shifts — so it doesn't fade into background noise.

Editing from the web cabinet

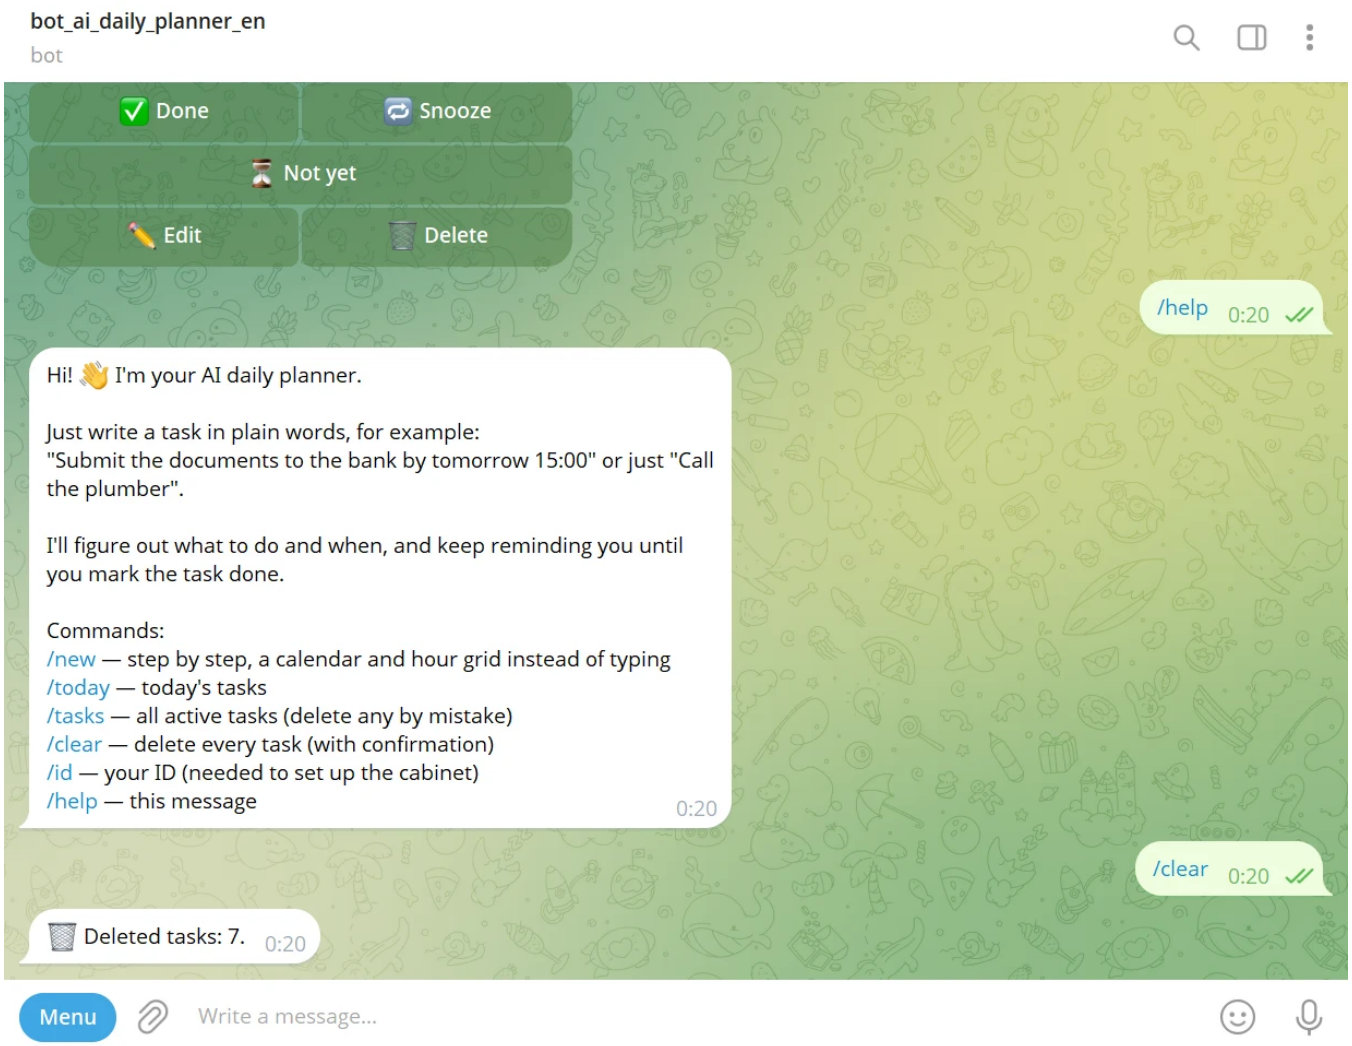

Any task's title, next reminder, recurrence and final deadline can be edited from the dashboard, not just from Telegram.

Bulk cleanup, safely

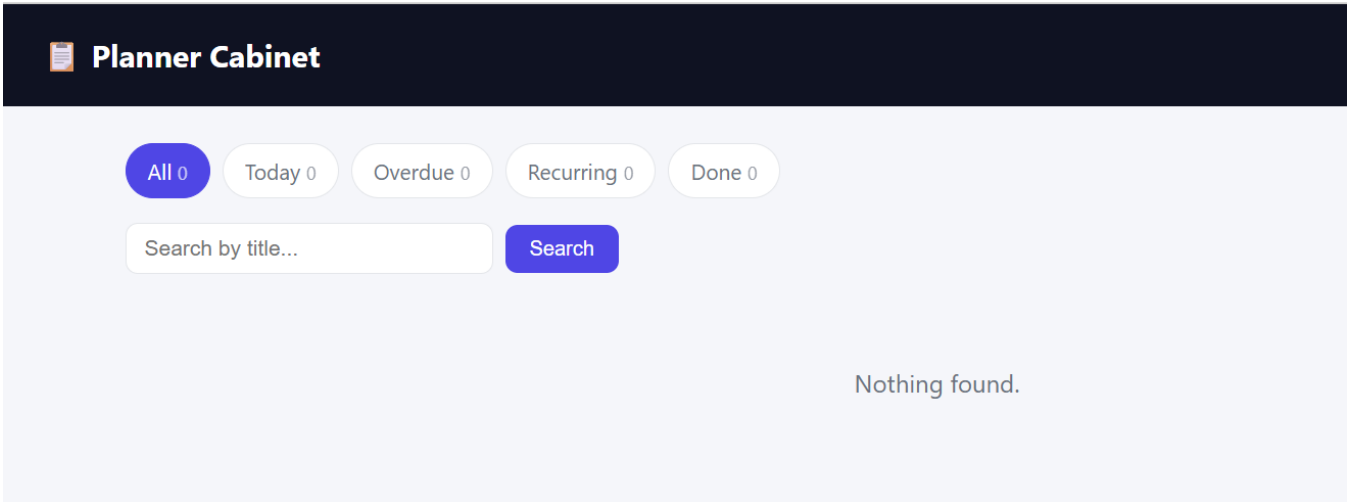

/clear wipes every task — but only after an explicit, hard-to-misstap confirmation.

Cleanup confirmed

A clear count of exactly what was removed.

A clean slate

Dashboard and bot stay in sync — once cleared, both show nothing left.
